Hooperative Designer™

Hooperative Designer™

Design

EASY and FAST
Hooperative Designer is a web application developed to design hoopers courses and more. The design process is simple and fast, supported by several features (distance calculation, three line types, equipment list, templates, 3D simulation, etc..) to create smooth and fluid courses.

Simulate

MEASURE MANY, CUT ONCE
Once the course is designed, it can be viewed and navigated in 3D. You can perform a virtual walkthrough and assume the perspective of either the dog or the handler, achieving a higher level of accuracy and realism in the design experience.

Share

NONE OF US IS AS SMART AS ALL OF US
Real time project sharing facilitates collaboration between instructors, judges, handlers, enabling immediate feedback from collegues and professionals.

Train

CONTINUOUS LEARNING FOR CONTINUOUS SUCCESS
Hooperative Designer is designed as a training aid thanks to its export and customization features, the ability to add directional arrows, and the real-time course sharing function with correction options from the instructor.
